

Server Explanation

The app developed by Vikramjeet lies in /app directory.

It's using PM2 as process manager: <https://pm2.keymetrics.io/>

We had previously CRON job but because Vikramjeet has timer insider of the app we commented it out. You can check it with `crontab -e`

To stop both server and crawler do

```
pm2 stop all
```

To troubleshoot and check logs:

```
pm2 logs
```

To start both server and crawler again:

```
pm2 start all
```

To start/stop only server

```
pm2 stop app
```

```
pm2 start app
```

To start/stop only crawler

```
pm2 stop crawler
```

```
pm2 start crawler
```

To install new code just replace files with new ones and stop both server and crawler. Then start server and after that start crawler. Important to have a delay of at least 2 seconds before starting crawler.

Server needs some time to start while crawler start immediately and needs server to be already fully working.
