

ADAMKYC WordPress Plugin

Installation

Obtain a copy of project through Git or Zip archive. Then make sure that composer is installed on your PC. And run `composer install`. After all libraries are installed you can continue to development.

Development

Install plugin via Deployment into your WordPress installation (see Deployment section). Head to `/wp-content/includes/plugins/` and here find your folder and open it in your code editor.

Packing

To package plugin into archive just create a Zip out of all files that are in root folder of plugin. And it's ready to be deployed. Don't forget to first do the installation step.

Deployment

Opne Plugins > Add New Plugin and click on Upload Plugin. Whether you are installing it first time or you want to update the plugin with new version.
